RATIO ANALYSIS: PROFITABILITY AND TURNOVER RATIOS

Professor Brian Bushee

DuPont Ratio Analysis Framework

Profit Margin Ratios

- What are the drivers of profitability?
 - Decompose Return on Sales by income statement line item
- Gross Margin = (Sales Cost of Goods Sold) / Sales
- SG&A-to-Sales = SG&A Expense / Sales
- Operating Margin = Operating Income / Sales
- Interest Expense-to-Sales = Interest Expense / Sales
- Effective Tax Rate = Income Taxes / Pre-tax Income

Asset Turnover Ratios

- How many times per year do we cycle through accounts?
 - Example: Inventory Turnover of 8 means that we build and sell Inventory 8 times per year, on average.
- Accounts Receivable Turnover = Sales / Average A/R
- Inventory Turnover = Cost of Goods Sold / Average Inventory
- Accounts Payable Turnover = Purchases / Average Accounts Payable
 - (Purchases = Ending Inventory + COGS Beginning Inventory)
- Fixed Asset Turnover = Sales / Avg. Net PP&E

Days Outstanding Ratios

- How many days, on average, are accounts outstanding?
 - Example: Days Inventory of 45 means that it takes 45 days, on average, from the time we start building Inventory until we sell it
- Days Receivable (Sales) Outstanding = 365 * (Average A/R / Sales)
- Days Inventory = 365 * (Average Inventory / Cost of Goods Sold)
- Days Payable = 365 * (Average Accounts Payable / Purchases)
- Net Trade Cycle = Days Receivable + Days Inventory Days Payable
 - Net Trade Cycle represents the gap between cash outflows and cash inflows that we have to bridge with short-term borrowing
